

Brofer supports innovation with the sponsorship of UniZEB, a cutting-edge UNIPD project.

31/05/2024

We are excited to share that yesterday, May 30, 2024, our team represented by Paolo Delfitto and Enrico Bertelli, took part in the inauguration of the UniZEB project, born from a multidisciplinary team of Unipd - at the Padua Construction School - of which Brofer is a sponsor.

UniZEB is an initiative that aims to develop a cutting-edge 80m² laboratory building. Built with innovative technologies such as cross-laminated timber (CLT), this building will offer comfort, usability and accessibility for people with disabilities. Designed for a typical family, it will have areas dedicated to conviviality, service and rest, organized around a central patio.

But UniZEB will not just be a sustainable home, but rather a real open-air laboratory, infrastructured and computerized to constantly

monitor the functioning of the technologies installed in real conditions of use. This will allow companies like ours to test cutting-edge solutions.

As a sponsor, Brofer will play a key role in promoting innovation and sustainability in construction through this revolutionary platform. Our participation confirms our constant commitment to the development of technologies that improve the quality of life while respecting the environment.

Updates will follow on this initiative of which we are proud to be part.
