

AIR DISTRIBUTION FOR SUPERIOR COMFORT.

Solutions designed to distribute air into a room uniformly and in a controlled way, ensuring comfort and ventilation quality. Proven geometries and multi-directional configurations promote effective distribution, reducing drafts and temperature differences. Adjustment options allow adaptation to design needs, including during commissioning on site. Durable materials and refined finishes ensure long-term performance and architectural integration.

DIFFUSERS

REGULATION

FLEXIBLE DUCTS

FLEXIBILITY THAT FOLLOWS THE PROJECT.

Flexible hoses for air connections: light and adaptable, available with thermal and acoustic insulation, including antibacterial options supporting safe, fast installation and consistent performance over time.

SYSTEMS FOR REGULATING AIR DISTRIBUTION.

Solutions for regulating and controlling airflow rate, designed to ensure balancing, efficiency and functional flexibility of systems. Devices for modulation, shut-off and automatic airflow management provide adaptability to different operating conditions. Robust constructions and reliable mechanisms ensure accurate calibration, tightness and continuity of operation helping optimize energy use and maintain correct ventilation performance over time.

FIRE PROTECTION

FIRE PROTECTION AND SMOKE MANAGEMENT.

Solutions designed to ensure fire compartmentation in air systems, limiting the spread of flames, smoke and heat. Fire protection systems intervene automatically, ensuring thermal insulation and structural integrity in accordance with European fire resistance standards. The new range of smoke management products ensures effective smoke control during emergencies, minimizing risk to occupants.

FILTERS AND SOLUTION ATTENUATORS

HEALTHY AIR, QUIET ENVIRONMENTS.

Solutions designed to improve air quality and acoustic comfort. Sound-absorbing structures support ventilation while limiting noise transmission and propagation. A wide range of filtration systems ensures high air quality, from domestic environments to operating rooms.

HEALTHY AIR IN YOUR HOME, THE SMART WAY.

VMC DOMESTIC solutions ensure continuous air exchange with heat recovery efficiency of up to 90% and airflow rates from 60 to over 500 m³/h, adapting to any home. These systems reduce CO₂, humidity, and indoor pollutants, improving comfort without wasting energy. High-efficiency EC motors, quiet operation, high-performance filters, and management via CO₂/humidity sensors or an App make your home a healthier place, every day.

VMC DOMESTIC

PLENUM and ACCESSORIES

THE RIGHT AIR TO SUPPORT ATTENTION AND LEARNING.

VMC SCHOOL solutions are designed for high-occupancy environments, providing constant air changes, CO₂ level control, and effective filtration of fine particles and contaminants. Ultra-high energy efficiency systems (>80-90%) ensure thermal comfort and sustainability, even during continuous operation. Cleaner, controlled air helps improve concentration, wellbeing, and safety in educational spaces.

VMC SCHOOL

VMC PROFESSIONAL

HIGH PERFORMANCE FOR SPACES THAT WORK.

VMC PROFESSIONAL solutions meet the needs of offices and commercial spaces with airflow rates starting from 700 m³/h, thanks to EN 308-certified heat exchangers and advanced control systems. Automatic management of CO₂, humidity, and temperature combined with EC motors and high-efficiency filters ensures consistent indoor air quality and reduced energy consumption. A concrete support for productivity, comfort, and sustainability in professional environments.

BREATHING TODAY THE FUTURE WE WANT

Air diffusion, VMC and
Outdoor AC covers for
advanced aeraulic systems.
